

Tank90 Design System Reverse Engineering Report

This document translates the visual and structural patterns observed in the Tank90 website into a

reusable design system. The goal is to preserve the same visual language while applying it to a Sales Automation Application.

Design Philosophy

Premium editorial aesthetic, oversized typography, minimal decoration, strong whitespace usage,

fashion/streetwear inspired visual hierarchy, flat design, restrained motion, and curated layouts.

Typography System

Hero Display: 88–166px

H2: 48px

H3: 40px

H4: 32px

H5: 24px

Body Large: 20px

Body: 16px

Small: 14px

Caption: 12px

Use bold display typography for branding and section headings. Use clean readable text fonts for all

application content.

Color System

Primary Background: Warm Cream (#F2ECD8)

Primary Text: Charcoal (#131212)

Accent: Olive Green (#6D7431)

Highlight: Lime-Yellow (#DFE350)

Alert / Attention: Red (#D02028)

White and Black used sparingly for contrast.

Layout Standards

Max content width: ~980px.

Large whitespace between sections.

Content-first layout with centered containers.

Avoid dashboard-style dense layouts.

Component Guidelines

Sharp corners (0px radius).

No shadows.

Minimal borders.

Large typography-driven cards.

Flat surfaces and strong contrast.

Motion System

Only subtle fade and slide transitions. No flashy animations. Motion should guide attention rather

than entertain.

Sales Automation Adaptation

Keep CRM, leads, activities, reports and sales pipelines visually editorial. Use oversized page titles.

Use typography and whitespace to establish hierarchy instead of cards/shadows. Replace generic

SaaS aesthetics with premium publication-style layouts.

AI Build Specification

When generating the application with Claude Code, Antigravity, Cursor, Lovable, Bolt, or other AI

tools: 1. Maintain Tank90 visual language. 2. Use flat design. 3. Use sharp corners. 4. No neumorphism, glassmorphism, or heavy shadows. 5. Typography must be the primary visual element. 6. Use constrained content width. 7. Maintain earthy premium color palette. 8. Favor whitespace over visual separators. 9. Keep interactions subtle and fast. 10. Design should feel like

a luxury editorial publication rather than a traditional CRM dashboard.

Prompt for AI App Builders

Build a sales automation platform using the Tank90 design language. The interface must feel premium, editorial, minimalist, and fashion-brand inspired. Use oversized typography, constrained

layouts, flat surfaces, sharp corners, subtle motion, earth-tone colors, and generous whitespace.

Avoid conventional SaaS dashboard styling.
